

# Marrow Grip Kettlebell Shell

CF-nylon shell over a 42% gyroid core. Textured handle diffuses hand pressure across a wider surface than cast iron.

| Infill     | 42%        | Material   | CF-Nylon            |
| Rated      | 32kg rated | Weight     | 2.1kg shell         |
| Print time | 14 hr      | Dimensions | Ø 210mm handle bore |
| Price      | \$89       |            |                     |

## How it's built

Printed in two halves and bonded at the equator seam, then filled with a sand-and-resin ballast core to hit the rated weight exactly. The gyroid lattice in the shell wall handles impact from set-downs; the ballast core is what gives it mass, not the plastic.

## Customer notes

D. Alvarez — ★★★★★

Cracked a plastic j-cup on a cheap rack once. This shell has taken way more abuse and shows nothing.

R. Okafor — ★★★★★■

Grip is genuinely better than cast iron on high-rep swings. Took one star off only because the ballast rattles faintly if you shake it hard.
